

**FINAL EXAMINATION****MASTER OF BUSINESS ADMINISTRATION
MASTER OF BUSINESS ADMINISTRATION (CORPORATE ADMINISTRATION
AND GOVERNANCE)****COURSE : CORPORATE FINANCIAL MANAGEMENT
AND ANALYSIS****COURSE CODE : FIN4263****DURATION : 3 HOURS****INSTRUCTIONS TO CANDIDATES:**

1. This question paper consists of **FOUR (4)** questions.
2. Answer **ALL** questions in the Answer Booklet provided.
3. Please check to make sure that this examination pack consists of:
 - i. The Question Paper.
 - ii. An Answer Booklet.
 - iii. Appendix 1 – 5.
4. Do not bring any material into the examination hall. The use of a calculator is allowed.
5. Please write your answer using permanent ink.

DO NOT OPEN THIS QUESTION PAPER UNTIL YOU ARE TOLD TO DO SO

The question paper consists of 5 printed pages including the front page

QUESTION 1

- a. i. Critically contrast **THREE (3)** differences between an offer for sale and a rights issue as methods of raising equity capital. In your answer, consider the implications for both the issuing company and existing shareholders.
(6 marks)
- ii. As a financial manager of a not-for-profit organization, determine **TWO (2)** financial goals that would be appropriate to guide your organization decision-making.
(4 marks)
- b. Eirwan, aged 40, is a senior consultant with two key financial objectives: funding her child's higher education and preparing for retirement. She currently has RM800,000 in savings and expects an annual portfolio return of 8%. However, she has a low risk tolerance and prefers to avoid equity market volatility.

Education Goal: Requires RM1,500,000 in 8 years.

Retirement Goal: Requires RM500,000 annually for 25 years starting at age 65.

Required:

- i. Determine the present value (PV) required today to satisfy the education goal, assuming an 8% discount rate.
(2.5 marks)
- ii. Determine the capital amount needed at age 65 to sustain the retirement withdrawals.
(2.5 marks)
- iii. Calculate the Present Value (PV) of that retirement amount at Eirwan's current.
(3 marks)
- iv. Evaluate whether Eirwan's current savings are sufficient to meet both her financial goals. Provide financial reasoning and assumptions to support your evaluation.
(7 marks)

(Total: 25 marks)

QUESTION 2

Red Rose Sdn Bhd is evaluating two mutually exclusive investments in Project Road and Project Pump. Both projects have a lifespan of 4 years and are expected to generate the following cash inflows:

Year	Project Road (RM)	Project Pump(RM)
0	(1,300,000)	(1,200,000)
1	400,000	300,000
2	450,000	450,000
3	500,000	350,000
4	800,000	400,000

Additional Information:

The company's required rate of return is 12%. Ignore the effects of taxation, depreciation, and inflation.

Required:

- a. For both projects, calculate the following:
 - i. Payback Period (PP). (7 marks)
 - ii. Net Present Value (NPV). (6 marks)
 - iii. Internal Rate of Return (IRR) using the interpolation method between 12% and 24%. (8 marks)
- b. Based on your analysis, identify which project Red Rose Sdn Bhd should undertake. (Show using at least three capital budgeting criteria.) (4 marks)

(Total: 25 marks)

QUESTION 3

Gerhana Sdn Bhd a boutique investment advisory firm, recently secured an endowment fund of RM3,500,000 from a high-net-worth institutional client. The client expects Gerhana to design a portfolio that not only aligns with long-term wealth maximisation but also considers risk-adjusted returns. The board of directors has identified five strategic projects with differing levels of market risk and potential capital appreciation.

The directors are particularly interested in how systematic risk (beta) will affect the overall portfolio performance and wish to evaluate the decision using risk-adjusted metrics. The risk-free rate is currently 4%.

Economic Condition	Probability	Market return (R_m)
Recession	0.25	7%
Normal	0.50	10%
Boom	0.25	4%

The proposed projects are as follows:

Investment (RM)	Project	Beta Coefficient (β)
600,000	Cakui	1.2
700,000	Lintah	1.5
850,000	Sumi	1.1
750,000	Selendang	0.8
600,000	Serambi	1.4

Required:

- Evaluate the expected market return using the probability model. (3 marks)
- Determine the portfolio beta using investment weights in your calculation. (5 marks)
- Find the Capital Asset Pricing Model (CAPM) to compute the required rate of return for each project. (9 marks)
- Examine the overall required rate of return for the portfolio. (5 marks)
- If the company aims to reduce the overall risk of its investment portfolio, identify one project that should be removed or scaled down. Support your recommendation using the project's beta value as justification. (3 marks)

(Total: 25 marks)

QUESTION 4

Dwirekto Bhd, a Nusajaya-based technology firm, is planning a capital expansion valued at RM120 million. The company seeks to optimize its capital structure before committing to the investment. As of 31 May 2025, Dwirekto's capital structure consists of RM400,000 in 9% debentures (with five years to maturity), RM150,000 in 5% preference shares, RM300,000 in ordinary share capital at par value of RM1, RM50,000 in share premium, and RM100,000 in retained earnings, bringing the total capital base to RM1,000,000.

The market prices and payouts for the instruments are:

Instrument	Market Price (RM)	Face Value (RM)	Annual Payout (RM)
9% Debentures (Redeemable)	970	1,000	90
5% Preference shares (Irredeemable)	88	100	5
Ordinary shares	20	1	1

Additional Information:

- The company recently paid a dividend of RM1.00 per share and expects this to grow by 7% annually
- Flotation cost for new ordinary shares is 6% of the market price, while for preference shares it is 5% of face value and a flotation cost about 5% of the face value, will be incurred for debentures.
- The company has RM40 million in retained earnings available for reinvestment.
- The applicable corporate tax rate is 24%.

Required:

a. Calculate the following:

- After-tax cost of debt (K_d). (7 marks)
- Cost of preference shares (K_p). (1.5 marks)
- Cost of retained earnings (K_e). (2 marks)
- Cost of new ordinary shares (K_{ne}). (2.5 marks)

b. Weighted Average Cost (WACC).

(12 marks)

(Total: 25 marks)

(TOTAL: 100 MARKS)

FORMULA

Time Value of Money

1. Present value

- a. $PV_n = FV (PVIF\ i, n)$ (using PVIF table) or

$$PV_n = \frac{FV}{(1+i)^n}$$
 (formula)
 (Discounting interest)
- b. $PV_n = FV (PVIF\ i/m, n \times m)$ (using PVIF table) or

$$PV_n = \frac{FV}{(1+i/m)^{n \times m}}$$
 (formula)
 (Non-annual periods)
- c. $PVA_n = PMT (PVIFA\ i, n)$ (using PVIFA table) or

$$PVA_n = PMT (1 - (1+i)^{-n}) / i$$
 (formula)
 (PV Ordinary annuity)
- d. $PVA_n = PMT (PVIFA_i, n) (1+i)$ (using PVIFA table)
 (PV Annuity due)
- e. $PVP_{\infty} = PMT \times (1/i)$
 (PV Perpetuity)

2. Future Value

- a. $FV_n = PV (FVIF\ i, n)$ (using FVIF table) or

$$FV_n = PV (1+i)^n$$
 (formula)
 (Compounding interest)
- b. $FV_n = PV (FVIF\ i/m, n \times m)$ (using FVIF table) or

$$FV_n = PV (1+i/m)^{n \times m}$$

 (non-annual periods)
- c. $FVA_n = PMT (FVIFA\ i, n)$ (using FVIFA table) or

$$FVA_n = PMT ((1+i)^n - 1) / i$$
 (formula)
 (FV Ordinary annuity)
- d. $FVA_n = PMT (FVIFA_i, n) (1+i)$ (using FVIFA table)
 (FV Annuity due)

Capital Budgeting Techniques

1. Payback period (PP)

$$PP = \text{Initial Outlay} / \text{Annual cash flow}$$

(The cash flow amount is same every year)

2. Net Present Value (NPV)

$$NPV = CF_0 + \frac{CF_1}{(1+r)^1} + \frac{CF_2}{(1+r)^2} + \dots + \frac{CF_N}{(1+r)^N}$$

3. Internal Rate of Return (IRR)

$$IRR = r_a + \frac{NPV_a}{NPV_a - NPV_b} (r_b - r_a)$$

r_a = lower discount rate chosen

r_b = higher discount rate chosen

N_a = NPV at r_a

N_b = NPV at r_b

Risk and Return

1. Holding Period Return (HPR)

$$HPR = \frac{\text{Current income} + \text{Capital gain}}{\text{Beginning Investment}}$$

$$HPR = (P_{t+1}/P_t) - 1$$

2. Expected Return (ER)

$$ER = X_1P(X_1) + X_2P(X_2) + \dots + X_nP(X_n)$$

3. Variance (σ^2)

$$\sigma^2 = \frac{\sum (xi - \bar{x})^2}{N}$$

4. Standard Deviation (σ)

$$\sigma = \sqrt{\sigma^2}$$

3. Required rate of return by using the Capital Asset Pricing Model (CAPM)

Required rate of return = Risk-free rate (R_f) + Beta (β) (Market Risk Premium)

Risk Premium = Expected Market Return (R_m) - Risk-free rate (R_f)

Cost of capital1. Cost of Debt (K_d)

$$K_d = I + \frac{1000 - Nd}{N}$$

$$\left[\frac{Nd + 1000}{2} \right]$$

I = annual interest b'4 tax.

Nd = net proceeds from the sale of debt (bond).

n = number of years to the bonds maturity.

After tax;

$$K_i = K_d \times (1 - T)$$

OR

$$P_o = I(PVIFA_{k_d, n}) + M(PVIF_{k_d, n})$$

Where:

P_o = market price of debt;

I = annual dollar of interest paid;

M = maturity value of debt;

k_d = required rate of return (before-tax cost of debt);

n = number of years to maturity

2. Cost of Preferred Stock (K_p)

$$K_p = \frac{\text{Dividend}}{\text{Market Price}}$$

$$K_p = \frac{D}{P_o}$$

P_o = mkt value of preferred stock

D = annual dividend

K_p = required rate of return for preferred stock

3. Cost of Common Stocks Retained Earnings (internal) (K_e)

$$K_e = \frac{D_1}{P_o} + g$$

$$**D_1 = D_0 (1 + g)$$

P_o = price of the stock today

D_1 = dividend at the end of the first year

K_e = required rate of return on equity

g = constant growth rate of dividends

4. Cost of Common Stocks Issuing new shares of common stock (external) (K_{ne})

$$K_{ne} = \frac{D_1}{NP_0} + g$$

5. Weighted Average Cost of Capital (WACC)

$$WACC = (\text{The cost of each source of financing}) \times (\text{Percentage of the financing provided by that sources})$$

$$WACC (k_a) = (W_{Td} \times k_d) + (W_{Tp} \times k_p) + (W_{Ts} \times k_s)$$

6. Breakpoint

$$= \frac{\text{Available Retained Earnings}}{\text{Percentage of Total}}$$
